

EDUCATION

Minerva University

Bachelor's Degree — Computer Science & Economics

San Francisco, CA

Expected Graduation: May 2028

- Coursework:
 - * Data Structures and Algorithms, Single and Multivariate Calculus, Linear Algebra, Probability and Statistics.
- External Coursework:
 - * Preparing Global Leaders Forum (PGLF) - 21st Century Leadership Seminar.
 - * Run the Future Entrepreneurship Bootcamp.
- Awards:
 - * Rise for the World: Finalist, 2022, 2023 (0.5% acceptance rate)
 - * Young Voices Model United Nations Best Delegate — Gold Award
- Fellowships:
 - * Coding Fellow @ Makers

EXPERIENCE

Build.inc

Software Engineering Intern

New York City, NY

May 2026 - August 2026

- Worked alongside domain experts to develop software that helped close a S&P 500 customer. Optimized CI robustness and speed, cutting deployment time of testing environments from 20 minutes to 2 minutes.

Domu (YC S24)

Software Engineering Intern

San Francisco, CA

April 2025 - August 2025

- Developed a voice agent for one of the biggest banks in Latin America — dialed 500,000+ calls with it (and still calling). Worked on systems to improve agents autonomously, front-ends with Next.js, and flew to client sites.

NASA SpaceApps

Technical Student Consultant

Mountain View, CA

September 2024 - April 2025

- Developed the first no-code Urban Heat Island Effect visualization platform as a technical student consultant for NASA Space Apps. Led Google Earth Engine integration, Gemini Chatbot integration, and platform cloud deployment. [See Platform].

Minerva University

Academic Intern

San Francisco, CA

August 2024 - PRESENT

- Presented how to implement Deep Knowledge Tracing using Recurrent Neural Networks to university faculty. Reviewed studies for IRB compliance at MIT-based data collection platform CHS.
- Currently appointed as teaching assistant (TA) for freshman-year complexity science course.

Down to Earth

Technical Lead

San Francisco, CA

October 2024 - March 2025

- Co-produced a climate change documentary now screened in San Francisco and the European Parliament. Developed Python script for animation management and set up cloud-based video editing environment. [See Documentary]

HACKATHONS

Minna Hackathon 2025

1st Place — Most Impactful Hack

Tokyo, Japan

December 2025

- Created Puumba: a Duolingo-style app to teach vibe-coding skills in developing countries. Developed a stateless artifact system for rendering AI code without sandboxing or dockerization on a Supabase backend. [See GitHub]

Multimodal AI Agents Hackathon

2nd Place — Best Use of Agno

San Francisco, CA

February 2025

- Developed an agentic tool leveraging Agno, Google's Gemini, and AgentQL to match students with internships and generate custom cover letters. Currently being developed for inclusion in Agno's and AgentQL's example libraries. [See Project]

VIBE25-01: After Hours Vibe Hackathon

Winner — Open Track

San Francisco, CA

April 2025

- Developed the back-end for an orchestration system that coordinates multiple LLMs to automatically generate a prompt for voice agents in under five seconds used to generate our winning demo. [See Loom; system flowchart at 2:20]

VIBE25-03: Hack the Prompt – CTF Edition

Winner — Most Secrets Compromised, Best Engineered Attack

San Francisco, CA

August 2025

- Compromised the system prompt of 13 AI agents to extract a hidden flag, the most of any team. Developed shell script to execute prompt injection attacks across networked Raspberry Pi endpoints, winning the best engineered attack.
